

VIROCLINICS BIOSCIENCES

is a frontrunner in improving human and animal health, providing the biopharmaceutical community with expert advice and best in class service for (pre) clinical drug development of antivirals, vaccines and other products aimed at preventing or treating virus infections. Our extensive experience with clinical and preclinical studies for respiratory viruses, including our speciality in influenza, puts us at the forefront of developing products for prevention and treatment.

knows your target

virology assays

high throughput database management
quality assured control testing

molecular assays

phase I-IV clinical studies
phenotyping & genotyping

PRECLINICAL SERVICES

includes testing of efficacy, safety, PK and (immune) toxicology of drugs, antibodies, vaccines and antivirals targeting viral infectious diseases in different species. Viroclinics offers validated diagnostic assays to measure serological and cell mediated immune responses, virus load in different tissues and, if needed, custom made assays as requested by the customer.

ASSAY DEVELOPMENT SERVICES

offers innovation and the introduction of new tools and keeps analysis up to date with the increasingly demanding criteria for developing new therapeutic and prophylactic candidates up to market registration. Customized assay and protocol development is followed by standardization and validation procedures to allow for routine application in a clinical trial setting.

CLINICAL DIAGNOSTIC SERVICES

supports and accelerates the market entry of new drugs, vaccines and antivirals, and assists in pre- and post marketing surveillance programs. Services are customized to specific needs, enabling maximum flexibility from day-to-day analysis to high throughput bulk analysis. It ensures timely delivery of assay results and performs all analysis according to a very strict quality system.

CLINICAL TRIAL OPERATIONS SERVICES

provides logistic support to virology based clinical studies, starting with monitor the quality from sample collection until study result reporting. Services include manufacture and distribution of virology sampling kits, sample handling laboratory supplies, instruction manuals, training of sites and processing laboratories, sample requisition management, cold chain logistics and 24/7 Help-desk facility.
